PROFESSIONAL SUMMARY

Java Backend Developer with **3.9 years** of progressive, cross-domain experience delivering **production-grade microservices, RESTful APIs, and event-driven backend systems** using **Java 8/17/21, Spring Boot, Hibernate/JPA, MySQL, Redis, and Apache Kafka**. Successfully delivered enterprise-grade e-commerce and hotel booking platforms handling high-volume transactional workloads. Proficient in **AWS (EC2, S3, RDS), Docker, and Jenkins CI/CD**. Additionally brings **hands-on Blockchain experience** with distributed ledger technologies and smart contract development. Known for clean architecture, SOLID design principles, **85%+ unit test coverage**, and consistent Agile delivery. Actively targeting Java Backend Developer roles at product companies, service firms, and growth-stage startups.

TECHNICAL SKILLS

Languages & Frameworks: Java (Core, Java 8/17/21), Spring Boot, Spring MVC, Hibernate, JPA

Architecture & Design: Microservices, RESTful APIs, API Versioning, MVC, SOLID Principles, Design Patterns

Databases & Caching: MySQL, MongoDB, Redis, JDBC, Query Optimization, Indexing,

Messaging & Streaming: Apache Kafka, Event-Driven Architecture, Asynchronous Workflows, Topic Partitioning

Cloud & DevOps: AWS (EC2, S3), Docker, Jenkins, CI/CD Pipelines, Maven, Git, Linux

Blockchain: Distributed Ledger Technology, Smart Contracts, Blockchain Concepts, Solidity, ERC 20

Testing & Quality: JUnit 5, Mockito, TDD, SonarQube, Integration Testing — 85%+ unit test coverage

Tools & Monitoring: Git, GitHub, IntelliJ IDEA, Postman, Swagger/OpenAPI, Log4j, Logback, JIRA, Confluence

Practices: Agile/Scrum, Performance Profiling, Structured Logging, Root Cause Analysis (RCA)

PROFESSIONAL EXPERIENCE

Software Engineer | TapQwik Software Private Limited, Bengaluru

Oct 2022 – Present

- Architected and delivered scalable **microservice-based backend systems** using Java 8+, Spring Boot, Hibernate, and MySQL — sustaining high-volume transactional loads across e-commerce and hotel booking platforms, improving system scalability by **~30%**.
- Designed and maintained **production RESTful APIs** with versioning, error contracts, pagination, and full Swagger/OpenAPI documentation for seamless frontend and third-party integration.
- Reduced API response times through **Redis caching, JPA query optimization**, smart pagination, and lean payload design across critical high-traffic endpoints.
- Implemented Apache Kafka event-driven pipelines** for async inter-service communication — improving system decoupling, fault tolerance, and real-time notification delivery.
- Deployed containerized applications on **AWS EC2 and S3** using Docker + Jenkins CI/CD pipelines — reducing deployment time by **~25%** and eliminating manual release effort.
- Achieved **85%+ unit test coverage** with JUnit 5 and Mockito; enforced SonarQube quality gates — zero critical production defects across all releases.
- Applied SOLID principles and GoF design patterns** (Singleton, Factory, Builder, Observer) to deliver extensible, maintainable, and reusable backend components.
- Optimized API performance end-to-end via structured logging (Log4j/Logback), Redis caching, and SQL query profiling — achieving consistent latency improvements across all critical services.
- Led UAT and production release coordination** with QA and DevOps teams; maintained full Swagger API documentation enabling rapid developer onboarding.
- Collaborated in **Agile/Scrum ceremonies** — sprint planning, stand-ups, retrospectives — delivering 100% sprint commitments consistently using JIRA and Confluence.

- Contributed to **Blockchain-based backend solutions** involving distributed ledger concepts, smart contract fundamentals, and decentralized application architecture.
- Assisted in developing and testing **smart contract logic** for transaction validation and data integrity on blockchain networks.
- Collaborated with cross-functional teams (Product, QA, DevOps) in Agile/Scrum ceremonies — consistently delivering 100% sprint commitments across all quarters.

KEY PROJECTS

Philips E-Commerce Platform

Stack: Java 8+, Spring Boot, Hibernate, MySQL, Redis, Kafka, AWS EC2/S3, Docker, JUnit 5, Swagger/OpenAPI

- Architected end-to-end e-commerce backend for Philips Electronics covering **product catalogue, inventory management, cart, order processing, and secure payment integration** using Java, Spring Boot, and Hibernate.
- Designed **high-performance REST APIs** for catalog management, pricing rules, promotional offers, and user sessions — integrated with frontend and third-party payment gateways.
- **Integrated Apache Kafka** for async processing of order confirmations, inventory updates, and real-time notifications between microservices — improving system resilience.
- Boosted system throughput via **Redis caching and SQL query optimization** — reducing DB load and delivering faster end-user experience across high-traffic endpoints.
- Enforced **input validation, exception handling, and security controls** — zero critical security incidents post-launch; delivered full Swagger/OpenAPI documentation.
- Achieved **85%+ test coverage** through JUnit 5 and Mockito test suites; deployed on AWS EC2 with Jenkins CI/CD — zero critical rollbacks across all production releases.

Trivago – Hotel Booking Platform

Stack: Java 8+, Spring Boot, Hibernate, MySQL, Redis, Kafka, AWS, Docker, SonarQube, Log4j/Logback

- Built high-concurrency hotel booking backend supporting **real-time room availability, dynamic pricing, booking lifecycle, cancellations, and customer management** at scale.
- Designed **date-aware RESTful APIs** for availability search, booking workflows, and payment integrations — seamless frontend and third-party service connectivity.
- **Modelled optimized JPA/Hibernate relational mappings** across hotels, rooms, bookings, and customers — ensuring ACID-compliant transactional accuracy under concurrent user load.
- **Integrated Apache Kafka** for async processing of booking events, ticket confirmations, and push notifications — decoupling services and improving fault tolerance.
- Cut query latency via Redis caching, efficient serialization, and smart pagination — achieving **sub-200ms** response times for room availability APIs.
- Validated **100% of critical booking flows** with JUnit & Mockito tests; enforced SonarQube quality gates — zero critical findings across all production releases.

EDUCATION

B.Tech – Information Technology | Guru Jambheshwar University of Science & Technology | Pass-out: 2022

CERTIFICATIONS

- Java Development Certification Course
- Blockchain Fundamentals – Rapid Innovation

SOFT SKILLS

Problem-Solving • Team Collaboration • Adaptability • Innovative Thinking • Time Management • Creativity • Ownership & Accountability • Continuous Learning
